HOW TO CONTROL ANDROID DEVICE REMOTELY

ISL Light enables you to securely access any Android mobile device from your desktop computer or from another mobile device. Troubleshoot the device through automated real-time screenshot sharing or take full remote control of a Samsung device running Android 4.2.2 or newer.

1 START A SESSION

A supporter creates an ISL Light session on Windows, Mac or Linux computer or a mobile device.

ISL Light

2 DOWNLOAD ISL LIGHT

Client downloads the ISL Light application available free on Google Play and runs it.

ANDROID APP ON
Google play

3 JOIN THE SESSION

Client enters the session code and the connection is established.
